## PUBLIC PRESSURE WORKS!: Navy relenting on DU use at NWTRC, animal killing is the next fight

Carol Van Strum

Like  Tweet  Email 12 Comments / 12 New

The U.S. Navy discovered Tuesday what adequate public notice means, when more than 100 people turned up at a special public information meeting of the Mendocino County Board of Supervisors. At the request of CA Congressman Mike Thompson, the Navy had sent representatives to Ukiah to answer questions about the Navy's Pacific Northwest Training Range Complex draft Environmental Impact Statement, or EIS. The history of the Navy's attempt to push through the NWTRC's EIS with little notice or time for public input can be found [here](#).

**The public also learned what informed public comments can accomplish, when Navy Project Manager John Mosher announced that due to comments already received on the EIS, the Navy has issued a directive ordering all Pacific Fleet ships to stop all use of depleted uranium, effective immediately,** and to offload existing stocks of depleted uranium ordnance at the earliest opportunity.

In response to supervisors' questions, Mosher said that the depleted uranium (DU) would be disposed of as hazardous waste, and assured the supervisors that he would provide them with a copy of the written Navy directive. Present were Mendocino County Supervisors John Pinches, Kendall Smith, David Kolfax, John McCowan and Carre Brown.

The Navy was represented by John Mosher, project manager for the EIS, Kimberly Kler, environmental planner and also project manager, and Brian Wauer, Project Operations Specialist. Wauer is a military contractor whose expertise in environmental matters consists of degrees in administrative and industrial management.

After a well-rehearsed presentation of charts and summaries by Navy representatives, the supervisors opened the meeting to public comments and questions. For more than four hours, individuals – limited to three minutes each -- criticized the Navy plans and raised questions, many of them well prepared with citations to scientific data and specific statements in the EIS. Their comments noted the uniform vagueness of the EIS, particularly its total lack of specific information about the Navy's past and present activities off the Northwest coast, which Mosher admitted were the "baseline" for assessing impacts of increasing such activities.

Other commenters raised pointed questions about the toxic chemicals the Navy leaves behind to pollute Pacific waters, and many emphasized the Navy's admission that its sonar activities alone will "take" the lives and/or health of 32 species of marine mammals. A repeated comment was that the Navy should not be allowed to proceed with its plans.

The Navy's responses to questions were at best superficial. Kimberly Kler, the Navy's environmental planner and project manager, answered all questions about effects of explosions and sonar on fish and other marine life by referring to NOAA's National Marine Fisheries Service

reports that were not included in the EIS. The Navy evaded most questions with what one viewer called "canned irrelevancies," and on occasion outright misinformation.

For example, Mr. Wauer claimed that the Navy's estimates of marine mammal 'takes' (a euphemism for actions defined by the Endangered Species Act as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture or collect..." ) include all exposures to sonar going down to ambient levels. "This is untrue," says Natural Resources Defense Council (NRDC) attorney, Taryn Kiekow. "The Navy sets specific thresholds for temporary and permanent injury, as well as behavioral effects, that are significantly higher than ambient levels (which is why the Navy would consider it to be an effect in the first place)."

A number of Vietnam veterans and at least one Navy Gulf War veteran said bluntly that they in particular had no reason to trust anything the Navy or military said; one veteran quite eloquently listed the government's lies that Agent Orange was safe, that federal forest spraying was safe, that depleted uranium was safe. Only one member of the public spoke in favor of the Navy's proposed actions, a Navy veteran whose daughter was currently in the Navy. His statement that he wanted her to get the best training the Navy could give was almost identical to the only statement in favor given by another Navy parent at the Tillamook, Oregon, public meeting on February 26, 2009.

Following public comment, Supervisor Kendall Smith read and summarized NRDC's comments on the EIS as well as a letter from Humboldt County Supervisors, criticizing the Navy's extremely poor public notice, its inadequate discussion of behavioral and sub-lethal effects of sonar on marine animals and fish, and its total failure to explain the need to expand the Navy's training operations. The Mendocino supervisors asked questions of their own, and with one unpleasant dissent (Supervisor John Pinches), agreed to draft a letter, modeled on the comments prepared by NRDC, to be sent to congressional delegations of California, Oregon, and Washington. The draft letter will be discussed at the next board meeting, scheduled for April 7.

Even as the Navy asserts in public meetings and in its EIS that its mitigation measures -- which consist of posting a lookout on the ship's bow to look for whales -- are adequate to protect marine mammals, **the Navy simultaneously has requested authorization from NOAA's National Marine Fisheries Service to "take" -- i.e., maim, kill, and harass -- individuals of 32 species of marine mammals in the waters off the Northwest coast. The Navy asks permission to "take" 129,112 individuals per year, for a total of 5 years and 645,560 "takes."**

#### TO TAKE ACTION ON NAVY PLAN TO KILL MARINE MAMMALS:

---

***The National Marine Fisheries Service will accept public comments on the Navy's request until April 10, 2009.*** The Navy's request is reported in the **Federal Register, Vol. 74, No. 46, Wednesday, March 11, 2009/Notices, page 10557**, or found [here](#).

**Address Public Comments to NOAA c/o:  
Michael Payne, Chief, Permits Conservation and Education Division, Office of Protected Resources, National Marine Fisheries Service  
1315 East-West Highway, Silver Spring, MD 20910-3225.**

The mailbox address for providing email comments is **PR1.0648-XN87@noaa.gov**.

\* [new] Tips and recs and thanks (18+ / 0-)

for stepping up to the plate and getting involved!!  
Next, its time to protect marine wildlife.

by Carol Van Strum on Thu Apr 02, 2009 at 12:24:03 PM PDT

\* [new] Important issue (1+ / 0-)

Thank you for writing about this. I live in Oregon, and even here, this issue hasn't gotten much coverage.

by catdevotee on Thu Apr 02, 2009 at 12:47:23 PM PDT

\* [new] I haven't a clue why anyone ever thought using (0+ / 0-)

"depleted Uranium" was anywhere near save and to add in the fact that it is possible to turn it into A-bomb(and when used in H-bombs gives one hell of an extra kick to the explosion when it too undergoes fission)making stuff that makes it even more stupid to have it in use.

by defluxion10 on Thu Apr 02, 2009 at 12:57:31 PM PDT

\* [new] Change "save" into "safe".missed that mistake. (0+ / 0-)

sorry.

by defluxion10 on Thu Apr 02, 2009 at 12:59:21 PM PDT

[ Parent ]

**\* [new] Depleted uranium is actually not fissile (1+ / 0-)**

However, it can be used as feedstock in a breeder reactor to produce Plutonium which is fissile.

The danger of DU is ingestion or inhalation as like any heavy metal (lead), the effects on the body are poisonous.

The large mass of U238 allows a dimensionally compact projectile to attain tremendous kinetic (penetrating) energy compared to other materials.

[ **Parent** ]

**\* [new] In a Fusion Bomb the Neutrons released will (1+ / 0-)**

trigger U238 Fission.They Trigger the Hydrogen Fusion with a Fission reaction that in turn causes Fusion that release much more powerful Neutron that trigger fast Fission in U238.Read this on Wikipedia when I looked up Depleted Uranium so I just learned about this also.

by **defluxion10** on **Thu Apr 02, 2009 at 04:02:47 PM PDT**

[ **Parent** ]

**\* [new] Sonar (1+ / 0-)**

and underground explosions devastate marine mammals..let's hope they don't stop at this measure.

It's long past time we helped whales, dolphins and sharks survive. It's beyond criminal the impact humans have had on all species.

by **ohcanada** on **Thu Apr 02, 2009 at 01:06:12 PM PDT**

**\* [new] DU in the navy arsenal is likely sub-caliber (1+ / 0-)**

armor piercing cannon ammunition such as used in the Phalanx close-in weapons system.

Other than that, I can't think of what other Navy gun fires projectile that uses DU for the kinetic force that this dense material provides.

by **Ammo Hauler** on **Thu Apr 02, 2009 at 01:28:08 PM PDT**

**\* [new] I don't understand the need for sonar testing (0+ / 0-)**

in coastal waters.

Active sonar on surface ships pretty much sucks at finding submarines and subs use passive almost exclusively.

The amount of energy they put in the water is phenomenal.

by **justlen** on **Thu Apr 02, 2009 at 01:37:44 PM PDT**

**\* [new] DU use by Navy in northwest Pacific (1+ / 0-)**

According to the Navy EIS, the primary use of depleted uranium is in its 20mm ammunition. Assuming the Navy EIS figures to be annual usage (the charts do not identify whether they are daily, monthly, or yearly), the Navy's use of DU 20mm rounds has been 7,200 per year (assumed) for an unidentified number of years; their proposed alternatives would have increased that number up to 16,000 (presumably per year) had the directive to stop use of DU not happened.
