A Voice Only You Can Hear: DARPA's Sonic Projector

Imagine a weapon that creates sound that only you can hear. Science fiction? No, this is one area that has a very solid basis in reality. The Air Force has experimented with microwaves that create sounds in people's head (which they've called a possible psychological warfare tool), and [American Technologies can "beam" sounds to specific targets with their patented HyperSound](#) (and yes, I've heard/seen them demonstrate the speakers, and they are shockingly effective).

Now the Defense Advanced Research Projects Agency is jumping on the bandwagon with their new "Sonic Projector" program:

The goal of the Sonic Projector program is to provide Special Forces with a method of surreptitious audio communication at distances over 1 km. Sonic Projector technology is based on the non-linear interaction of sound in air translating an ultrasonic signal into audible sound. The Sonic Projector will be designed to be a man-deployable system, using high power acoustic transducer technology and signal processing algorithms which result in no, or unintelligible, sound everywhere but at the intended target. The Sonic Projector system could be used to conceal communications for special operations forces and hostage rescue missions, and to disrupt enemy activities.

Here's the question of the day: if the military were to beam voices into somebody's head, what would they say?

I am a civilian living in Miami Fl and for the past 13yrs I have been targeted by this weapon, I am an ordinary civilian with no political ties nor am I in any way a treat to national security. but government agencies (I suspect the CIA) have been tormenting me physically and psychotically by experimenting on me against my will with this technology, they have effectively destroyed my life over the years, I am now unemployed and my health and sanity have suffered through this ordeal, I have done research and found that these heinous experiments have been done to countless innocent civilians throughout the nation simply to test the limits of their technology. Make no mistake this

Technology is anything but non-lethal, I have been shocked experienced burning sensations on my skin. been woken out of my sleep had people scream and make threats to all throughout the day everyday without end for 13yrs. The constant stress, sleep deprivation, and mental anguish that I have been subjected to is nothing less than a crime, this so called audio gun is being groomed for civilian control if they can cause you stress or pain then they will easily control your behavior, keep you from protesting for your rights, influence your judgment, how you vote, how you think, the military downplays this as just something that being used overseas but what's to stop them from using it on the American people, they already install cameras on every corner and law enforcement is being supplied with drones.. this is how our freedom dies, read more about my experience <https://governmentmindtorture....> and google mk-ultra or microwave weapon victims

Tsais

"if the military were to beam voices into somebody's head, what would they say?"

Probably send David Bowie songs plugging their walkmen into the Sonic Projectors.

Personally, I'd like a stereo version to do away with headphones and cable salad.
