Acoustic Data Analysis Centre Pacific’s (ADAC (P)) mission is to serve as the Maritime Pacific authority for underwater warfare and route survey acoustic data. This is achieved by providing plans, analysis, and training to Formation assets.

To fulfill this mission ADAC(P) consists of four departments: Route Survey, Jezebel, Research and Training. Route Survey handles all collection and analysis of side-scan and bathymetric sonars.

Jezebel handles all aspects of analysis and research within the tactical acoustic community. Research performs long-term trend analysis. Training develops and provides daily regenerative training, via computer-based proficiency training packages, to all operationally employed Tactical Acoustic Operators.

Integral Unit

Organizational structure: JTFP/MARPAC > ADAC(P)
Officer in Charge: Commanding Officer
# of military personnel: 22
Headquarters Location: D260
Date stood up: April 1, 1995, as a stand-alone unit

Date Modified: 2009-08-28
