Welcome to the Mariana Islands Range Complex EIS/OEIS Website

Welcome to the Navy's official website for the Mariana Islands Range Complex Environmental Impact Statement/Overseas Environmental Impact Statement (EIS/OEIS). The Mariana Islands Range Complex consists of land, air, and sea areas of the Mariana Islands. The proposed action consists of an increase in the number of Mariana Islands Range Complex training operations, changes in the Navy's force structure (such as new weapons systems) and additional enhancements in the range facilities, including modernization and upgrading of training facilities, and research, development, testing and evaluation of new technologies. The proposed action is necessary for the Mariana Islands Range Complex to support current, emerging, and future training operations, and thus achieve and maintain Fleet and force readiness at all times. This EIS/OEIS examines the potential environmental effects of the Navy's proposal.

Mariana Islands Range Complex Training

The Mariana Islands Range Complex is the principal range for aviation, surface, submarine, amphibious, special warfare, and ground maneuvers in the Western Pacific.

Environmental Stewardship

The Navy manages its land, air, and sea ranges, facilities, and natural resources as integrated training range complexes to be able to meet its current and future requirements while protecting natural and cultural resources and minimizing effects to the environment.

The Navy Wants Your Input

Public involvement is a fundamental part of the EIS/OEIS development and the Navy wants and appreciates your comments. The Navy has established several venues and informational resource areas for the public to learn more and provide input.
